EDUCATION

William Lyon Mackenzie C.I.

MaCS Program (Grade 12)

North York, ON

Sep. 2022 – present

University of Waterloo

Software Engineering

Waterloo, ON

Incoming Sep. 2026

EXPERIENCE

Kumon Centre Assistant

Kumon of Richmond Hill-Elgin Mills

June 2025 – present

Richmond Hill, ON

- Supervised and helped children with both Mathematics and Reading
- Marked students' classwork and homework, providing detailed constructive feedback for them to work on
- Organized class materials for use in future classes

MCPT (Mackenzie Computer Programming Team) Vice President

William Lyon Mackenzie C.I.

Sep 2024 – present

North York, ON

- Created and tested competitive programming problems in C++, Java, and Python, and organized contests
- Managed the responsibilities of MCPT contest executives, assigning them tasks to complete
- Taught classrooms various competitive programming concepts, including DP and Fenwick Trees

TOPSOJ Volunteer Problem Tester

TOPS Online Judge

Dec 2023 – present

North York, ON

- Tested contest mathematics problems of varying difficulties
- Tested problems that ended up being a part of various math contests with prizes hosted by the site

PROJECTS

UW Orbital | *Python, FastAPI, Docker*

May 2026 – present

- Created a .yaml workflow to verify successful Keycloak service startup for authentication
- Created pytest tests to test the functionality of the login, callback, and logout API endpoints of MCC Authentication

stratum | *Python, Flask, JavaScript, HTML/CSS*

Apr 2026 – present

- Developed a full-stack chess website hosted locally, utilizing browser storage to synchronize UI states across webpages
- Implemented additional chess modifier selections to increase the challenge for experienced players
- Implemented various difficulties of chess engines running Stockfish within a Flask framework

minidungeon | *Python*

Jul 2025 – Sep 2025

- Developed a basic dungeon-crawler-like game with different stages using the Python pygame module
- Programmed dynamic gameplay settings including randomized minigames and mathematical state tracking to scale game difficulty
- Implemented scalable object-oriented design for entities and UI states

blahajsweeper | *Python*

Dec 2024 – Jan 2025

- Developed a simplistic object-oriented minesweeper-like game using the Python pygame module
- Implemented structured game controls to handle transitions between menus, gameplay event loops, and game conditions

TECHNICAL SKILLS

Languages: Python, C/C++, Java, JavaScript, HTML/CSS, SQL (Postgres)

Frameworks: FastAPI, Flask

Developer Tools: Docker, Git, VS Code, Visual Studio, PyCharm, Eclipse

AWARDS AND HONOURS

2026 CyberTitan National Finals - 1st Place

USACO Gold

Chess National Master (CFC)
